

pcscribble

The Digital PC Pen

The amazing new **pcscribble** digital pen enables you to Capture, Save and Convert handwritten notes in real time on your PC whilst writing your notes normally on your paper pad.

Imagine if you could capture your handwritten notes and diagrams directly into your PC or Notebook? Imagine then saving them into your own note manager software and then if required converting them to typed text? Imagine no more!!!!

Handwritten notes, maps, sketches, signatures and illustrations can all be captured using a normal ink filled pen!

pcscribble captures your handwritten notes in real time onto your PC or notebook.

Save them to your PC and then convert them to typed text and copy or export into MS Office™ applications like Word and Outlook. You can also handwrite directly into applications like MSN Messenger, Windows Journal & MS OneNote.

pcscribble also has mouse functionality and if you have MS Vista you can also use the inking and tablet PC features included with MS Vista and MS Office 2007.

pcscribble how it works

pcscribble works in
2 modes -

What's included-

Apcom pcscribble,
NoteTaker Receiver Unit,
1 x Ink Refill,
2 x SR 41 Batteries,
1 x Stylus
Quick Start Guide,
Note Manager Mini CD,
MyScript Mini CD,
Two Year RTM Warranty.

Note mode

In pen mode pcscribble captures natural handwriting onto a PC or notebook in real time from any paper up to A4 size. Once you have saved your notes in the note manager software included you can back up your notes and recycle your paper. Your notes can then be edited and converted to editable typed text with the MyScript recognition software included. They can then be exported straight into MS Word® or Outlook® or copied to any application. The MyScript software can even learn your handwriting and allows create your own handwriting profile & dictionary.

Mouse Mode

Mouse Mode turns the pcscribble into a mouse with hovering and 2 button functionality. In Mouse mode you can write directly into Windows Journal, and other Tablet PC applications such as MS OneNote™, MSN Messenger™, MS Outlook™ and snipping tool. When connected mouse mode speeds up the whole process of capturing your notes by switching effortlessly between pen & mouse mode. If you have MS Vista™ you have the extra feature of the 'digital ink handwriting software' feature included in MS Office™ where you can handwrite directly onto office applications like MS Word® & Windows Journal®.
